Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Uniswap, Uniswap, PancakeSwap etc’...)

SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

Project Engagement

During the 1st of November 2022, **CarCollectorCrypto Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

Contract Link

v1.0

- Provided as files

Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
Critical	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
High	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
Medium	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
Low	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
Informational	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:
 - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
 - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
 - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
 - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
 - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

```
IERC20  
SafeMath  
Context  
Address  
Ownable  
IUniswapV2Factory  
IUniswapV2Pair  
IUniswapV2Router01  
IUniswapV2Router02
```

Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.

v1.0

File Name	SHA-1 Hash
contracts/carollectorcrypto.sol	316b0aca76b5cc792f5615cb35b94f329375edd2

Metrics

Source Lines v1.0

Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Is contract an upgradeable
2. Correct implementation of Token standard
3. Deployer cannot mint any new tokens
4. Deployer cannot burn or lock user funds
5. Deployer cannot pause the contract
6. Deployer cannot set fees
7. Deployer cannot blacklist/antisnipe addresses
8. Overall checkup (Smart Contract Security)

Is contract an upgradeable

Name	
Is contract an upgradeable?	No

Correct implementation of Token standard

ERC20				
Function	Description	Exist	Tested	Verified
TotalSupply	Provides information about the total token supply	✓	✓	✓
BalanceOf	Provides account balance of the owner's account	✓	✓	✓
Transfer	Executes transfers of a specified number of tokens to a specified address	✓	✓	✓
TransferFrom	Executes transfers of a specified number of tokens from a specified address	✓	✓	✓
Approve	Allow a spender to withdraw a set number of tokens from a specified account	✓	✓	✓
Allowance	Returns a set number of tokens from a spender to the owner	✓	✓	✓

Write functions of contract v1.0

unlock

Deployer cannot mint any new tokens

Name	Exist	Tested	Status
Deployer cannot mint	—	—	—

Deployer cannot burn or lock user funds

Name	Exist	Tested	Status
Deployer cannot lock	✓	✓	✗
Deployer cannot burn	—	—	—

Comments:

v1.0

- Owner can lock user funds by
 - Setting max tx amount to 0

Deployer cannot pause the contract

Name	Exist	Tested	Status
Deployer cannot pause	—	—	—

Deployer cannot set fees

Name	Exist	Tested	Status
Deployer cannot set fees over 25%	✓	✓	✗
Deployer cannot set fees to nearly 100% or to 100%	✓	✓	✗

Comments:

v1.0

- Fees can be set without any limitations

```
879 function setTaxFeePercent(uint256 taxFee↑) external onlyOwner() {  
880     _taxFee = taxFee↑;  
881 }  
882  
      ftrace | funcSig  
883 function setLiquidityFeePercent(uint256 liquidityFee↑) external onlyOwner() {  
884     _liquidityFee = liquidityFee↑;  
885 }
```

Deployer can blacklist/antisnipe addresses

Name	Exist	Tested	Status
Deployer cannot blacklist/antisnipe addresses	—	—	—

Overall checkup (Smart Contract Security)

Tested	Verified
✓	✓

Legend

Attribute	Symbol
Verified / Checked	✓
Partly Verified	⚠
Unverified / Not checked	✗
Not available	—

Modifiers and public functions

v1.0

transfer	
approve	
transferFrom	
increaseAllowance	
decreaseAllowance	
deliver	
excludeFromReward	
onlyOwner	Ⓜ
includeInReward	
onlyOwner	Ⓜ
excludeFromFee	
onlyOwner	Ⓜ
includeInFee	
onlyOwner	Ⓜ
setTaxFeePercent	
onlyOwner	Ⓜ
setLiquidityFeePercent	
onlyOwner	Ⓜ
setNumTokensSellToAddToLiquidity	
onlyOwner	Ⓜ
setMaxTxPercent	
onlyOwner	Ⓜ
setSwapAndLiquifyEnabled	
onlyOwner	Ⓜ
claimTokens	
onlyOwner	Ⓜ
renounceOwnership	
onlyOwner	Ⓜ
transferOwnership	
onlyOwner	Ⓜ
lock	
onlyOwner	Ⓜ
unlock	

Comments

- Deployer can set following state variables without any limitations
 - _taxFee
 - _liquidityFee
 - numTokensSellToAddToLiquidity
 - _maxTxAmount
- Deployer can enable/disable following state variables
 - _isExcluded
 - _excluded
 - _isExcludedFromFee

- swapAndLiquifyEnabled
- Deployer can set following addresses
- Existing Modifiers
 - onlyOwner
 - lockTheSwap
- If the address is excluded then it is not able to call deliver function
- Owner is able to call “claimTokens” to get whole contract balance (natives only, not tokens)
- Liquidity will be send to the owner. Beware of this he/she can take out the liquidity

Please check if an OnlyOwner or similar restrictive modifier has been forgotten.

Source Units in Scope

v1.0

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/carollectorcrypto.sol	5	5	1152	876	521	311	533	
	Totals	5	5	1152	876	521	311	533	

Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalised lines of the source unit (e.g. normalises functions spanning multiple lines)
nSLOC	normalised source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

Audit Results

Critical issues

No critical issues

High issues

No high issues

Medium issues

Issue	File	Type	Line	Description
#1	Main	Regain ownership	See description	<p>Owner can regain ownership after transferring it with following steps:</p> <ol style="list-style-type: none">1. Call lock function to set <code>_previousOwner</code> to the own address2. Call unlock function to get ownership back3. Transfer/renounce ownership4. Call unlock function to get ownership back <p>Make sure to set the <code>_previousOwnership</code> back to address zero after using the unlock function</p>

Low issues

Issue	File	Type	Line	Description
#1	Main	Contract doesn't import npm packages from source (like OpenZeppelin etc.)	-	We recommend to import all packages from npm directly without flatten the contract. Functions could be modified or can be susceptible to vulnerabilities
#2	Main	A floating pragma is set	5	The current pragma Solidity directive is „ <code>^0.6.12</code> ”.

#3	Main	Missing Zero Address Validation (missing-zero-check)	749 748	Check that the address is not zero
#4	Main	State variable visibility is not set	700	It is best practice to set the visibility of state variables explicitly
#5	Main	Local variables shadowing	990 779	Rename the local variables that shadow another component
#6	Main	Missing Events Arithmetic	884 892 888 880	Emit an event for critical parameter changes

Informational issues

Issue	File	Type	Line	Description
#1	Main	Misspelling	See description	Change following words: <ul style="list-style-type: none"> - tokensIntoLiquidity L711 - swaping L900 - recieve L900 Make sure to change it everywhere else as well.
#2	Main	NatSpec documentation missing	-	If you started to comment your code, also comment all other functions, variables etc.
#3	Main	Old pragma version	See description	We recommend you to use at least pragma version 0.8.x
#4	Main	Unemitted events	706	Emit or remove the event

Commented Code exist

There are some instances of code being commented out in the following files that should be removed:

File	Line	Comment
Main	194	// assert(a == b * c + a % b); // There is no case in which this doesn't hold
	839	// require(account != 0x7a250d5630B4cF539739dF2C5dAcb4c659F2488D, 'We can not exclude Uniswap router.');

Recommendation

Remove the commented code, or address them properly.

Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/latest/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

02. November 2022:
