# Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Uniswap, Uniswap, PancakeSwap etc’...)

**SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.**

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

## Description

"You are not your job, you're not how much money you have in the bank. You are not the car you drive. You're not the contents of your wallet. You are not your fucking khakis. You are the all singing, all dancing crap of the world." The first rule of CULT is you TALK about CULT, we are almost all oppressed in this society, that doesn't take away that some are much more oppressed than others, but rather than rise up, we argue between ourselves about who is more oppressed, you can't stand up for this, why? Because of that! You are talking from a position of privilege?! Who are you to speak for X?! We are all prostitutes: Whether we sell what's between our legs; or what's between our ears. There is only one winner, and that is the oppressor.

## Project Engagement

During the 1st of September 2022, **CultDAO Art Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

# Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

| Level                | Value   | Vulnerability   | Risk (Required Action)  |
|----------------------|---------|---|---|
| <b>Critical</b>      | 9 - 10  | A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.      | Immediate action to reduce risk level.                              |
| <b>High</b>          | 7 – 8.9 | A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way. | Implementation of corrective actions as soon as possible.           |
| <b>Medium</b>        | 4 – 6.9 | A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.                                     | Implementation of corrective actions in a certain period.           |
| <b>Low</b>           | 2 – 3.9 | A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.       | Implementation of certain corrective actions or accepting the risk. |
| <b>Informational</b> | 0 – 1.9 | A vulnerability that have informational character but is not effecting any of the code.   | An observation that does not determine a level of risk              |

# Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

## **Methodology**

The auditing process follows a routine series of steps:

1. Code review that includes the following:
  - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
  - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
  - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
  - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
  - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

## Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

## Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

*A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.*

### v1.0

| File Name                    | SHA-1 Hash                               |
|------------------------------|--|
| contracts/cultPool_clean.sol | 458dec1f35642a005b3cd6abef95797e1a40b934 |

### v1.1

| File Name                    | SHA-1 Hash                               |
|------------------------------|--|
| contracts/CultRewardPool.sol | 408c5c4bd6e1ec8d55e71b551321107cc60628d8 |

### v1.2

| File Name                    | SHA-1 Hash                               |
|------------------------------|--|
| contracts/CultRewardPool.sol | e14359926d452033f4fb50c689c8cf94f479dd9b |

# Metrics

## Source Lines v1.1

## Risk Level v1.1

## Capabilities

### Components

| Version | Contracts | Libraries | Interfaces | Abstract |
|---------|-----------|-----------|------------|----------|
| 1.0     | 1         | 0         | 1          | 0        |
| 1.1     | 1         | 1         | 1          | 2        |

### Exposed Functions

*This section lists functions that are explicitly declared public or payable. Please note that getter methods for public stateVars are not included.*

| Version | Public | Payable |
|---------|--------|---------|
| 1.0     | 8      | 0       |
| 1.1     | 9      | 0       |

| Version | External | Internal | Private | Pure | View |
|---------|----------|----------|---------|------|------|
| 1.0     | 8        | 12       | 0       | 0    | 1    |
| 1.1     | 6        | 28       | 0       | 13   | 4    |

## State Variables

| Version | Total | Public |
|---------|-------|--------|
| 1.0     | 7     | 5      |
| 1.1     | 8     | 5      |

## Capabilities

| Version | Solidity Versions observed | Experimental Features | Can Receive Funds | Uses Assembly | Has Destroyable Contracts |
|---------|----------------------------|-----------------------|-------------------|---------------|---------------------------|
| 1.0     | 0.8.14                     |                       |                   |               |                           |
| 1.1     | ^0.8.0                     |                       |                   |               |                           |
|         | 0.8.14                     |                       |                   |               |                           |

| Version | Transfers ETH | Low-Level Calls | DelegateCall | Uses Hash Functions | EC Recover | New/Create/Create2 |
|---------|---------------|-----------------|--------------|---------------------|------------|--------------------|
| 1.0     | yes           |                 |              |                     |            |                    |

## Inheritance Graph

v1.0

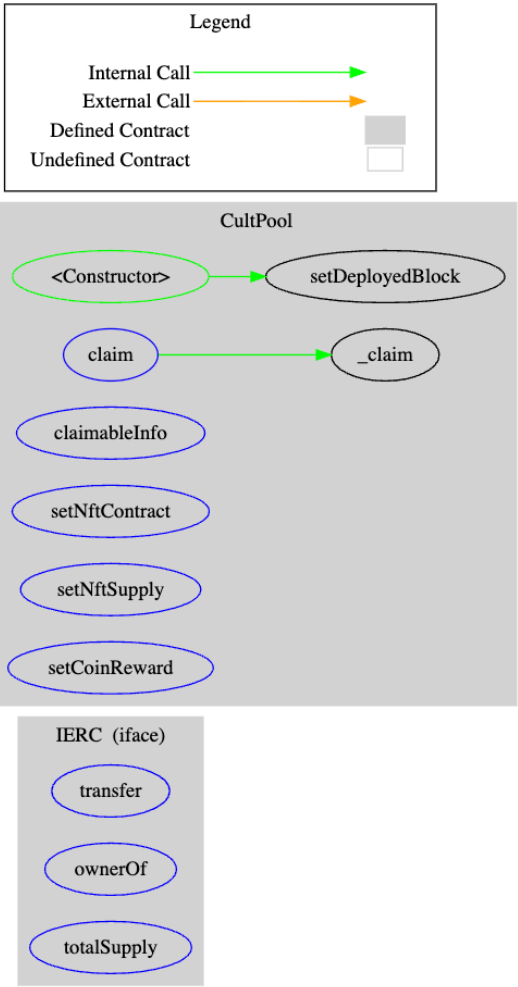

v1.1

# CallGraph

## v1.0

## v1.1

## Scope of Work/Verify Claims

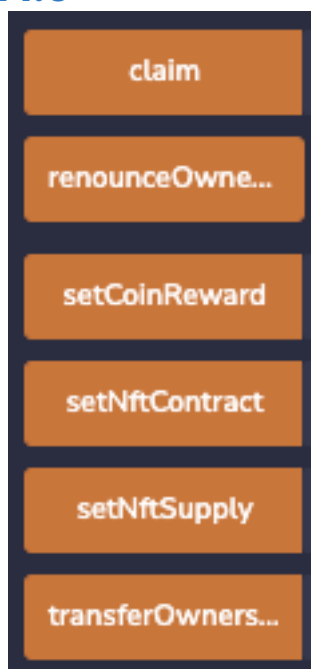

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Overall checkup (Smart Contract Security)

## Write functions of contract v1.0

## v1.1

## Overall checkup (Smart Contract Security)

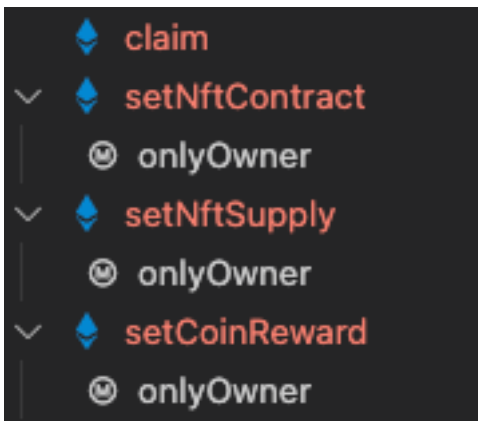

| Tested | Verified |
|--------|----------|
| ✓      | ✓        |

### Legend

| Attribute                | Symbol |
|--------------------------|--------|
| Verified / Checked       | ✓      |
| Partly Verified          | ⚠      |
| Unverified / Not checked | ✗      |
| Not available            | —      |

# Modifiers and public functions

## v1.0

Note: not listed functions was imported from libraries

## Comments

- Deployer can set following state variables without any limitations
  - nftSupply
- Deployer can set following addresses/url
  - nftContract
- You can set “deployedBlock” directly in the constructor, because you are not reusing it in the contract

## V1.1:

- setNftSupply and setNftContract are now implemented as constants.

## V1.2:

- Require statement while setting the coinReward has been removed. Now the owner is able to lock claim for addresses if the coinReward is set to 0

**Please check if an OnlyOwner or similar restrictive modifier has been forgotten.**

## Source Units in Scope

### v1.0

| Type | File                         | Logic Contracts | Interfaces | Lines      | nLines     | nSLOC      | Comment Lines | Complex. Score | Capabilities |
|------|------------------------------|-----------------|------------|------------|------------|------------|---------------|----------------|--------------|
|      | contracts/cultPool_clean.sol | 1               | 1          | 198        | 186        | 134        | 21            | 69             |              |
|      | <b>Totals</b>                | <b>1</b>        | <b>1</b>   | <b>198</b> | <b>186</b> | <b>134</b> | <b>21</b>     | <b>69</b>      |              |

### v1.1

| Type | File                         | Logic Contracts | Interfaces | Lines      | nLines     | nSLOC      | Comment Lines | Complex. Score | Capabilities |
|------|------------------------------|-----------------|------------|------------|------------|------------|---------------|----------------|--------------|
|      | contracts/CultRewardPool.sol | 4               | 1          | 541        | 514        | 228        | 219           | 96             |              |
|      | <b>Totals</b>                | <b>4</b>        | <b>1</b>   | <b>541</b> | <b>514</b> | <b>228</b> | <b>219</b>    | <b>96</b>      |              |

### v1.2

| Type | File                         | Logic Contracts | Interfaces | Lines      | nLines     | nSLOC      | Comment Lines | Complex. Score | Capabilities |
|------|------------------------------|-----------------|------------|------------|------------|------------|---------------|----------------|--------------|
|      | contracts/CultRewardPool.sol | 4               | 1          | 536        | 509        | 224        | 219           | 95             |              |
|      | <b>Totals</b>                | <b>4</b>        | <b>1</b>   | <b>536</b> | <b>509</b> | <b>224</b> | <b>219</b>    | <b>95</b>      |              |

## Legend

| Attribute        | Description   |
|------------------|---|
| Lines            | total lines of the source unit  |
| nLines           | normalized lines of the source unit (e.g. normalizes functions spanning multiple lines)   |
| nSLOC            | normalized source lines of code (only source-code lines; no comments, no blank lines)   |
| Comment Lines    | lines containing single or block comments   |
| Complexity Score | a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...) |

# Audit Results

## AUDIT PASSED

### Critical issues

**No critical issues**

### High issues

**No high issues**

### Medium issues

**No medium issues**

### Low issues

| Issue | File | Type                      | Line | Description                                  |
|-------|------|---------------------------|------|--|
| #1    | Main | Missing Events Arithmetic | 539  | Emit an event for critical parameter changes |

### Informational issues

**No informational issues**

### Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/v0.5.10/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

### 21. September 2022:

- Read whole report for more information
- Owner is able to lock claims by setting "coinReward" to 0.

## SWC Attacks

| ID                        | Title   | Relationships  | Status |

The logo features the words "Solid Roofed" in a white, handwritten-style script. The text is positioned over a faint, stylized background of a shield with a grid pattern. The shield is composed of several overlapping layers, creating a sense of depth and security.

Solid  
Roofed
