Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc’...)

SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

Project Engagement

During the 31st of October 2022, **Okapi Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
Critical	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
High	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
Medium	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
Low	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
Informational	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:
 - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
 - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
 - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
 - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
 - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

IERC20
Context
Ownable
 SafeMath

Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.

v1.0

File Name	SHA-1 Hash
contracts/staking.sol	0097dd05c8c2c4bac1c8d85afc92bcc6be57a6d0

v1.1

File Name	SHA-1 Hash
contracts/staking.sol	c117bf38c447d3611c7f4afbe98ec91ebda6d6ef

v1.3

File Name	SHA-1 Hash
contracts/staking.sol	6969a75fe10e544d425e1dc9bf18d7108217bf60
contracts/Ownable.sol	b0e1bd1d79bc151cdb618b28141379330da93e6

CallGraph v1.0

Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Is contract an upgradeable
2. Deployer cannot mint any new tokens
3. Deployer cannot burn or lock user funds
4. Deployer cannot pause the contract
5. Deployer cannot set fees
6. Deployer cannot blacklist/antisnipe addresses
7. Overall checkup (Smart Contract Security)

Is contract an upgradeable

Name	
Is contract an upgradeable?	No

Write functions of contract v1.3

1. compound (0xf69e2046)

2. invest (0x2afcf480)

3. renounceOwnership (0x715018a6)

4. setRewardPercentage (0x09653674)

5. setTax (0x667f6526)

6. setWallet (0xdeaa59df)

7. transferOwnership (0xf2fde38b)

8. withdrawRewardToken (0xaa7a07e9)

9. withdrawToken (0x50baa622)

10. withdrawalBNB (0xffde0a1e)

Deployer cannot mint any new tokens

Name	Exist	Tested	Status
Deployer cannot mint	—	—	—

Deployer cannot burn or lock user funds

Name	Exist	Tested	Status
Deployer cannot lock	✓	✓	✓
Deployer cannot burn	–	–	–

Comments:

v1.0

- Owner can lock user funds by
 - Setting “depoiteTax” to or above 100%
 - setting “hasStart” to false

v1.1

- State variable “hasStart” was removed from the deployer in the contract

Deployer cannot pause the contract

Name	Exist	Tested	Status
Deployer cannot pause	✓	✓	✓

Comments:

v1.0

- Owner can pause the invest by setting “hasStart” to false

v1.1

- Issue above was fixed

Deployer cannot set fees

Name	Exist	Tested	Status
Deployer cannot set fees over 25%	✓	✓	✓
Deployer cannot set fees to nearly 100% or to 100%	✓	✓	✓

Comments:

v1.0

- Fees can be set without any limitations. This causes that the whole amount to invest will go to the treasury address. The same for withdrawing funds with the “withdrawTax” variable. Beware of it.

v1.1

- Fees can be set to max 20%

Deployer can blacklist/antisnipe addresses

Name	Exist	Tested	Status
Deployer cannot blacklist/antisnipe addresses	—	—	—

Overall checkup (Smart Contract Security)

Tested	Verified
✓	✓

Legend

Attribute	Symbol
Verified / Checked	✓
Partly Verified	⚠
Unverified / Not checked	✗
Not available	—

Modifiers and public functions

v1.0

✓ 🔹 toggleSale Ⓜ onlyOwner	✓ 🔹 renounceOwnership Ⓜ onlyOwner
✓ 🔹 setWallet Ⓜ onlyOwner	✓ 🔹 transferOwnership Ⓜ onlyOwner
✓ 🔹 setTax Ⓜ onlyOwner	
✓ 🔹 setRewardPercentage Ⓜ onlyOwner	
🔹 invest 💰	
🔹 compound 💰	
🔹 withdrawTokens	
🔹 withdrawRewardToken	
✓ 🔹 withdrawTokens Ⓜ onlyOwner	
✓ 🔹 withdrawBNB 💰 Ⓜ onlyOwner	

Comments

- Deployer can set following state variables without any limitations
 - depoiteTax
 - withdrawTax
 - rewardPercentage
- Deployer can enable/disable following state variables
 - hasStart
- Deployer can set following addresses
 - treasury
- Existing Modifiers
 - onlyOwner

v1.1

- hasStart has been removed from the contract
- Following state variables has a restriction now and cannot become 100% or above

- [depoiteTax](#)
- [withdrawTax](#)

Please check if an OnlyOwner or similar restrictive modifier has been forgotten.

Source Units in Scope

v1.3

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/staking.sol	1	————	165	165	124	1	119	
	contracts/Ownable.sol	1	————	72	72	28	37	22	————
	Totals	2	————	237	237	152	38	141	

Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalised lines of the source unit (e.g. normalises functions spanning multiple lines)
nSLOC	normalised source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

Audit Results

Critical issues

No critical issues

High issues

No high issues

Medium issues

No medium issues

Low issues

No low issues

Informational issues

Issue	File	Type	Line	Description
#1	Main	Misspelling	See description	<p>Check the spelling in the contract. There are so many of it.</p> <p>Make sure to change it everywhere else as well.</p>
#2	Main	Unnecessary library	See description	<p>Above pragma 0.8.x you don't need to import SafeMath anymore because it is implemented by default already.</p> <p>Remove it and replace math operations.</p>

Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/latest/natspec-format.html>) for your contracts to provide rich

documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

10. November 2022:
