# Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc’...)

**SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.**

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

## Description

The Last Ape Standing is a project on the Binance Smart Chain, that will cause a psychological effect to create infinite buy pressure.

## Project Engagement

During the 4th of April 2022, **LastApeStanding Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

# Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
<b>Critical</b>	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
<b>High</b>	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
<b>Medium</b>	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
<b>Low</b>	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
<b>Informational</b>	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

# Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

## **Methodology**

The auditing process follows a routine series of steps:

1. Code review that includes the following:
  - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
  - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
  - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
  - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
  - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

## Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

```
./Address.sol  
./EnumerableSet.sol  
./IBEP20.sol  
./Ownable.sol  
./Routers.sol  
./SafeMath.sol
```

## Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

*A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.*

### v1.0

File Name	SHA-1 Hash
contracts/token/Routers.sol	1c5971386df2515660faad6f4ac6882d6607761b
contracts/token/IBEP20.sol	a08497f6c7d2d0098970df6ad43e934a92bd0bd3
contracts/token/LastApeStanding.sol	47bc3eb6335bb08db14f470b18d8bd0435804178
contracts/token/EnumerableSet.sol	7d538ac6120c6793721f6bb81816863392eb3097
contracts/token/Address.sol	a77aa33714f7f9c2e80c934836a77664683820cb
contracts/token/SafeMath.sol	5a5a292df7ba88465163ff4845a4fa1cf4cebc4c
contracts/token/Ownable.sol	02bc26c0dddc5ada9f6d045c630fb4544386315

# Metrics

## Source Lines v1.0

## Risk Level v1.0

## Capabilities

### Components

Version	Contracts	Libraries	Interfaces	Abstract
1.0	2	3	5	1

### Exposed Functions

*This section lists functions that are explicitly declared public or payable. Please note that getter methods for public stateVars are not included.*

Version	Public	Payable
1.0	129	5

Version	External	Internal	Private	Pure	View
1.0	83	119	20	24	65

### State Variables

Version	Total	Public
1.0	86	21

### Capabilities

Version	Solidity Versions observed	Experimental Features	Can Receive Funds	Uses Assembly	Has Destroyable Contracts
1.0	<code>^0.8.13</code>		yes	yes (2 asm blocks)	

Version	Transfers ETH	Low-Level Calls	DelegateCall	Uses Hash Functions	EC Recover	New/Create/Create2
---------	---------------	-----------------	--------------	---------------------	------------	--------------------

1.0	yes					
-----	-----	--	--	--	--	--

# Inheritance Graph

## v1.0

## Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

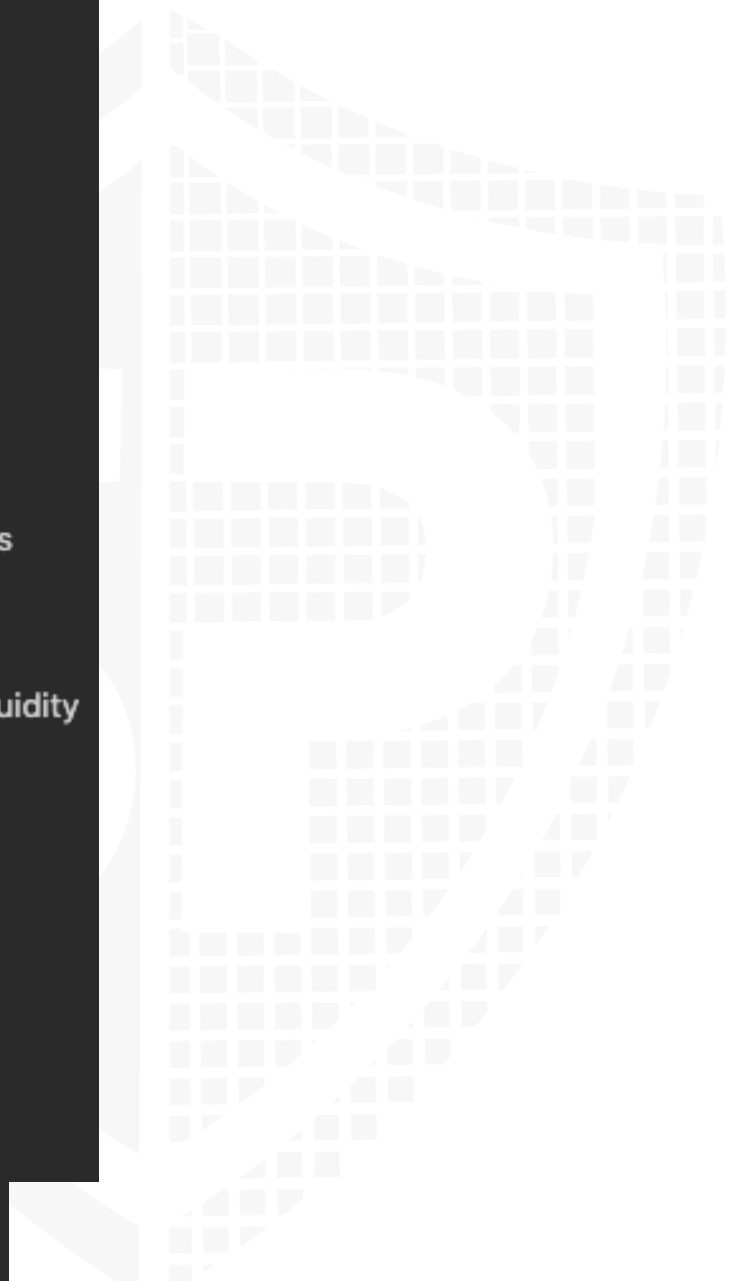

1. Correct implementation of Token standard
2. Deployer cannot mint any new tokens
3. Deployer cannot burn or lock user funds
4. Deployer cannot pause the contract
5. Overall checkup (Smart Contract Security)

### Correct implementation of Token standard

ERC20				
Function	Description	Exist	Tested	Verified
TotalSupply	Provides information about the total token supply	✓	✓	✓
BalanceOf	Provides account balance of the owner's account	✓	✓	✓
Transfer	Executes transfers of a specified number of tokens to a specified address	✓	✓	✓
TransferFrom	Executes transfers of a specified number of tokens from a specified address	✓	✓	✓
Approve	Allow a spender to withdraw a set number of tokens from a specified account	✓	✓	✓
Allowance	Returns a set number of tokens from a spender to the owner	✓	✓	✓

## Write functions of contract v1.0

LastApeStanding

```
transfer
approve
transferFrom
increaseAllowance
decreaseAllowance
excludeFromFee
includeInFee
setBuyFees
setSellFees
setJackpotFeatures
setJackpotHardFeatures
setJackpotTimespanInSeconds
setMaxTxAmount
setMaxWallet
setNumTokensSellToAddToLiquidity
setSwapAndLiquifyEnabled
includeFromSwapAndLiquify
excludeFromSwapAndLiquify
setUniswapRouter
setUniswapPair
enableTrading
collectMarketingFees
collectDevFees
setDevWalletAddress
setMarketingWalletAddress
setBuybackWallet
setLockedLiquidityAddress
renounceOwnership
transferOwnership
authorize
unauthorize
```

## Deployer cannot mint any new tokens

Name	Exist	Tested	Status
Deployer cannot mint	—	—	—
Max / Total Supply	10.000.000		

## Deployer cannot burn or lock user funds

Name	Exist	Tested	Status
Deployer cannot lock	✓	✓	✓
Deployer cannot burn	-	-	-

Comments:

**v1.0**

.

Deployer cannot pause the contract

Name	Exist	Tested	Status
Deployer cannot pause	-	-	-

## Overall checkup (Smart Contract Security)

Tested	Verified

# Modifiers and public functions

v1.0

- transfer
- approve
- transferFrom
- increaseAllowance
- decreaseAllowance
- excludeFromFee
  - onlyAuthorized
- includeInFee
  - onlyAuthorized
- setBuyFees
  - onlyAuthorized
- setSellFees
  - onlyAuthorized
- setJackpotFeatures
  - onlyAuthorized
- setJackpotHardFeatures
  - onlyAuthorized
- setJackpotTimespanInSeconds
  - onlyAuthorized
- setMaxTxAmount
  - onlyAuthorized
- setMaxWallet
  - onlyAuthorized
- setNumTokensSellToAddToLiquidity
  - onlyAuthorized
- setSwapAndLiquifyEnabled
  - onlyOwner
- includeFromSwapAndLiquify
  - onlyOwner
- excludeFromSwapAndLiquify
  - onlyOwner
- setUniswapRouter
  - onlyOwner
- setUniswapPair
  - onlyOwner
- enableTrading
  - onlyOwner
- collectMarketingFees
  - onlyMarketing
- collectDevFees
  - onlyDev

- setDevWalletAddress
  - onlyOwner
- setMarketingWalletAddress
  - onlyOwner
- setBuybackWallet
  - onlyOwner
- setLockedLiquidityAddress
  - onlyOwner
- renounceOwnership
  - onlyOwner
- transferOwnership
  - onlyOwner
- authorize
  - onlyOwner
- unauthorize
  - onlyOwner

## Comments

- Deployer can set following state variables without any limitations
  - numTokensSellToAddToLiquidity
- Deployer can enable/disable following state variables
  - authorizations
  - tradingOpen
    - Only once and cannot be set to false anymore
  - \_isExcludedFromSwapAndLiquify
  - swapAndLiquifyEnabled
  - \_isExcludedFromFee
- Deployer can set following addresses
  - \_owner
  - uniswapV2Pair
  - uniswapV2Router
- OnlyDev can call following functions
  - collectDevFees
- OnlyMarketing can call following functions
  - collectMarketingFees
- If the owner transfer ownership, the old owner has access to “onlyAuthorized” functions in the contract
  - getPendingTokens
  - getPendingBalances
  - setNumTokensSellToAddToLiquidity
  - setMaxWallet
  - setMaxTxAmount
  - setJackpotTimespanInSeconds
  - setJackpotHardFeatures
  - setJackpotFeatures
  - setSellFees
  - setBuyFees
  - excludeFromFee
  - excludeFromFee

**Please check if an OnlyOwner or similar restrictive modifier has been forgotten.**

# Source Units in Scope

## v1.0

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/token/Routers.sol	—————	4	348	23	18	1	136

	<b>Totals</b>	<b>6</b>	<b>5</b>	<b>2333</b>	<b>1696</b>	<b>1065</b>	<b>465</b>	<b>841</b>	 

## Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalized lines of the source unit (e.g. normalizes functions spanning multiple lines)
nSLOC	normalized source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

# Audit Results

## High issues

**No high issues**

## Medium issues

**No medium issues**

## Low issues

**No low issues**

## Informational issues

**No informational issues**

## Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/v0.5.10/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

The logo features the words "Solid Proofed" in a white, elegant script font. The word "Solid" is positioned above "Proofed". Behind the text is a faint, stylized shield emblem with a grid-like pattern, rendered in a darker shade of blue. The entire composition is set against a solid blue background.
