# Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc’...)

**SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.**

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

Version	Date	Description
1.0	22. March 2023	<ul style="list-style-type: none"><li>• Layout project</li><li>• Automated- /Manual-Security Testing</li><li>• Summary</li></ul>

## **Network**

Ethereum (ERC20)

## **Website**

[ClownWorldMeme.com](https://ClownWorldMeme.com)

## **Telegram**

<https://t.me/ClownWorldMeme>

## **Twitter**

<https://twitter.com/ClownWorldMeme>

## Description

The original Clown World meme coin on the Ethereum blockchain. Buy, hold, earn \$CLNWLD and join the resistance today.

## Project Engagement

During the Date of March 2023, **Clown World Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

# Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
<b>Critical</b>	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
<b>High</b>	7 - 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
<b>Medium</b>	4 - 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
<b>Low</b>	2 - 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
<b>Informational</b>	0 - 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

# Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

## **Methodology**

The auditing process follows a routine series of steps:

1. Code review that includes the following:
  - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
  - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
  - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
  - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
  - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

## Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

```
Context.sol
ERC20.sol
IERC20.sol
IERC20Metadata.sol
Migrations.sol
Ownable.sol
SafeMath.sol
```

## Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

*A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.*

### v1.0

File Name	SHA-1 Hash
contracts/Context.sol	6a0b5b8e1b849d1ea73eabcfb1c9cd7e0cdb91b
contracts/IERC20Metadata.sol	0ed8469a068d2d63a16eb789af5d748b46185ee9
contracts/SafeMath.sol	9977f59e81ce8733ea18df7e820555cefb6a5f0a
contracts/Ownable.sol	1d61029edf95f0c297061ee8ed185ee0a0588021
contracts/ERC20.sol	719a36514f52ee9873ac1c3c7f418948942af45b
contracts/IERC20.sol	3cb114c5eb5052015bdad7a20cd1d5d3559c754c
contracts/ClownWorld.sol	3e89d95915953f4a6a53dcd8a77ee1be19e23f4b

# Metrics

## Source Lines v1.0

## Risk Level v1.0

## Capabilities

### Components

Version	Contracts	Libraries	Interfaces	Abstract
1.0	2	1	4	2

### Exposed Functions

*This section lists functions that are explicitly declared public or payable. Please note that getter methods for public stateVars are not included.*

Version	Public	Payable
1.0	46	2

Version	External	Internal	Private	Pure	View
1.0	28	81	25	17	26

### State Variables

Version	Total	Public
1.0	35	19

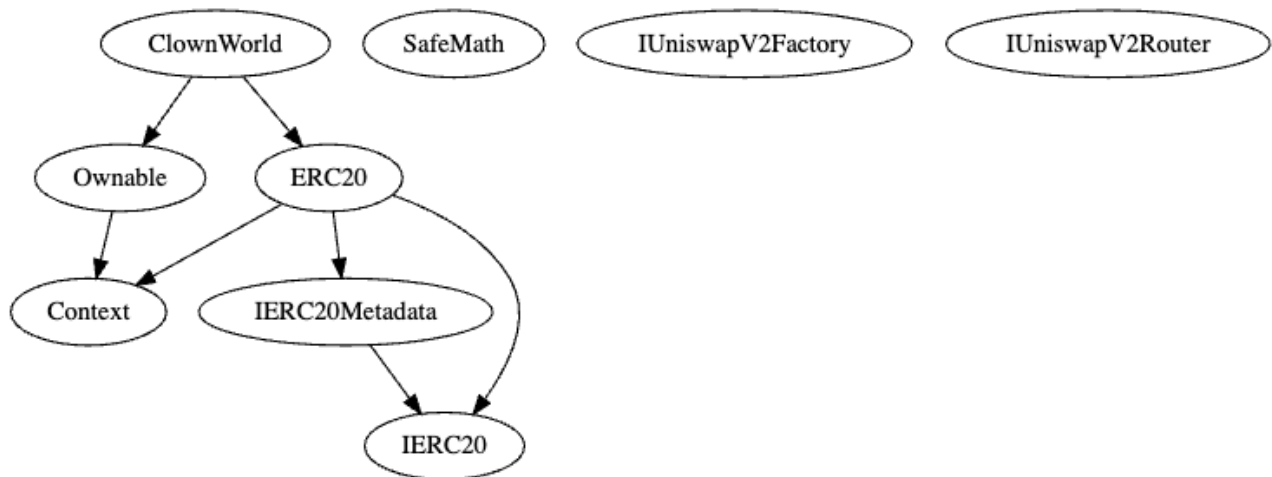

### Capabilities

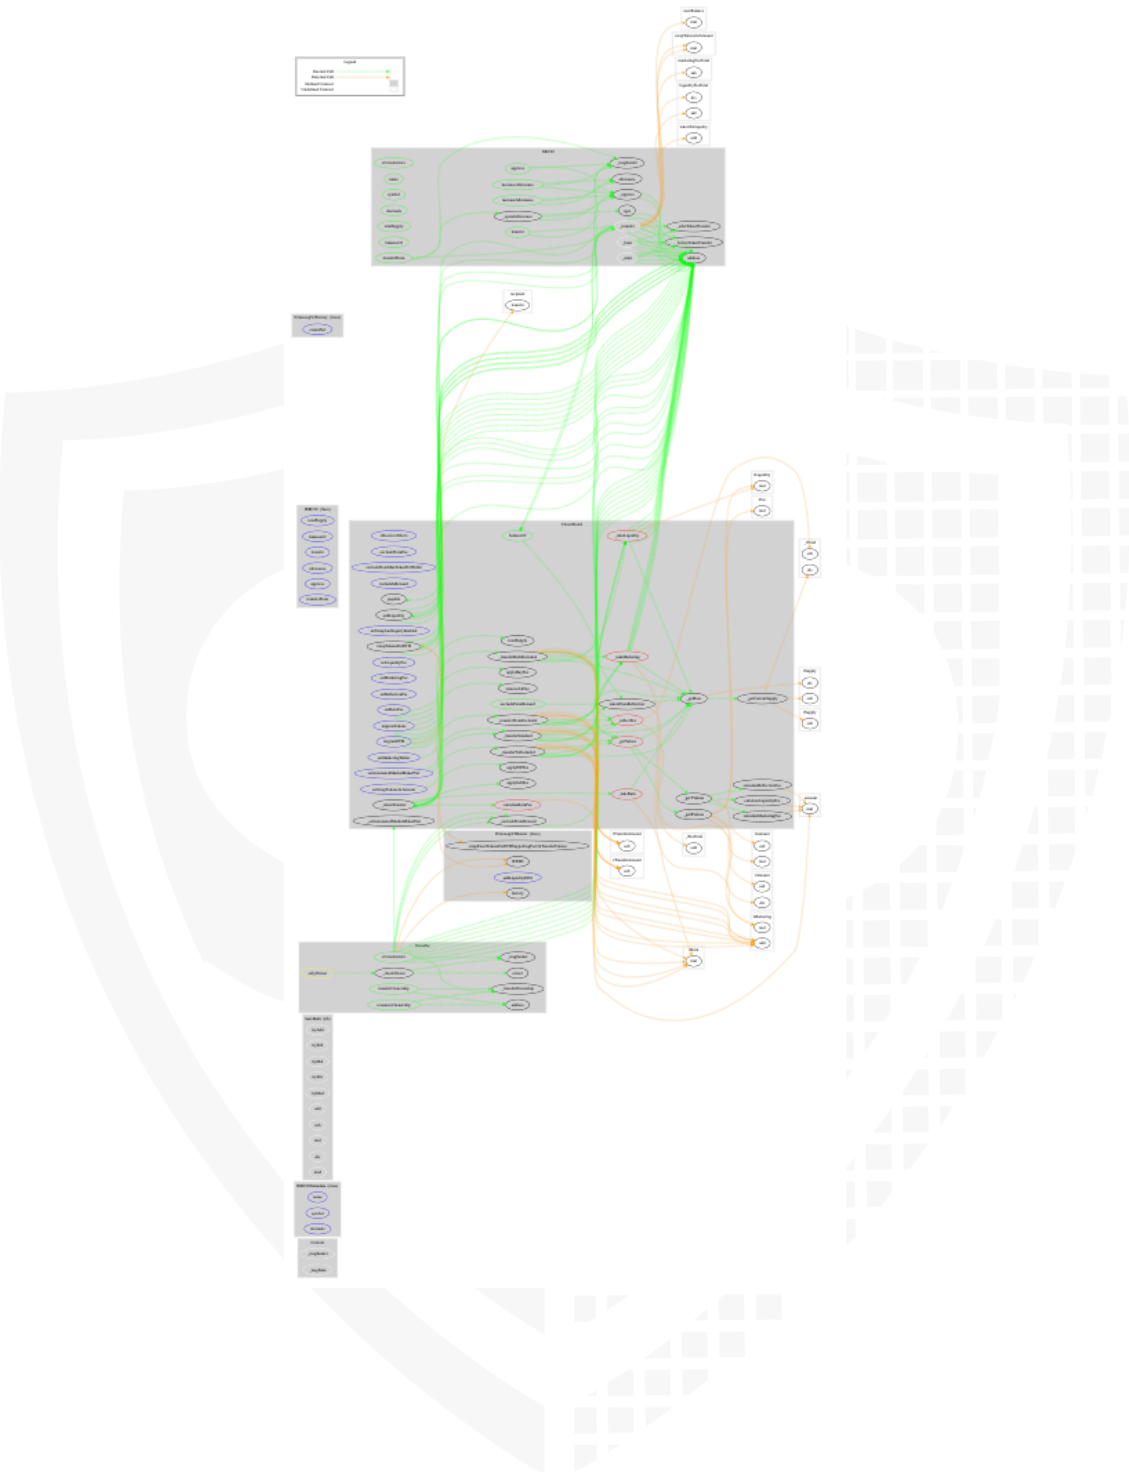

Version	Solidity Versions observed	Experimental Features	Can Receive Funds	Uses Assembly	Has Destroyable Contracts
1.0	<code>^0.8.0</code> <code>0.8.2</code>		<code>yes</code>		

Version	Transfers ETH	Low-Level Calls	DelegateCall	Uses Hash Functions	EC Recover	New/Create/Create2
---------	---------------	-----------------	--------------	---------------------	------------	--------------------

1.0	yes					
-----	-----	--	--	--	--	--

## Inheritance Graph v1.0

## Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Is contract an upgradeable
2. Correct implementation of Token standard
3. Deployer cannot mint any new tokens
4. Deployer cannot burn or lock user funds
5. Deployer cannot pause the contract
6. Deployer cannot set fees
7. Deployer cannot blacklist/antisnipe addresses
8. Overall checkup (Smart Contract Security)

## Is contract an upgradeable

Name	
Is contract an upgradeable?	No

## Correct implementation of Token standard

ERC20				
Function	Description	Exist	Tested	Verified
TotalSupply	Provides information about the total token supply	✓	✓	✓
BalanceOf	Provides account balance of the owner's account	✓	✓	✓
Transfer	Executes transfers of a specified number of tokens to a specified address	✓	✓	✓
TransferFrom	Executes transfers of a specified number of tokens from a specified address	✓	✓	✓
Approve	Allow a spender to withdraw a set number of tokens from a specified account	✓	✓	✓
Allowance	Returns a set number of tokens from a spender to the owner	✓	✓	✓

## Write functions of contract v1.0

1. approve (0x095ea7b3)
2. decreaseAllowance (0xa457c2d7)
3. excludeFromFee (0xdf8408fe)
4. excludeFromMaxTokenPerWallet (0x01d7532d)
5. excludeFromReward (0x52390c02)
6. includeInReward (0x3685d419)
7. increaseAllowance (0x39509351)
8. migrateETH (0x74da7cd8)
9. migrateTokens (0x957537f9)
10. renounceOwnership (0x715018a6)
11. setAutomatedMarketMakerPair (0x9a7a23d6)
12. setBurnFee (0xb4f500dd)
13. setLiquidityFee (0xea0a605f)
14. setMarketingFee (0xa918299c)
15. setMarketingWallet (0x5d098b38)
16. setReflectionFee (0xc065d7f0)
17. setSwapAndLiquifyEnabled (0xc49b9a80)
18. setSwapTokensAtAmount (0xa4a4f3b2)
19. transfer (0xa9059cbb)
20. transferFrom (0x23b872dd)
21. transferOwnership (0xf2fde38b)

## Deployer cannot mint any new tokens

Name	Exist	Tested	Status
Deployer cannot mint	✓	✓	✓
Max / Total Supply	555555555555		

## Deployer cannot burn or lock user funds

Name	Exist	Tested	Status
Deployer cannot lock	✓	✓	✓
Deployer cannot burn	✓	✓	✓

Comments:

**v1.0**

- Tokens
  - will be burned while tx

## Deployer cannot pause the contract

Name	Exist	Tested	Status
Deployer cannot pause	—	—	—

## Deployer cannot set fees

Name	Exist	Tested	Status
Deployer cannot set fees over 25%	✓	✓	✓
Deployer cannot set fees to nearly 100% or to 100%	✓	✓	✓

Comments:

### v1.0

- Fees can be set max to 25%

## Deployer can blacklist/antisnipe addresses

Name	Exist	Tested	Status
Deployer cannot blacklist/antisnipe addresses	—	—	—

## Overall checkup (Smart Contract Security)

Tested	Verified
✓	✓

### Legend

Attribute	Symbol
Verified / Checked	✓
Partly Verified	⚠
Unverified / Not checked	✗
Not available	—

# Modifiers and public functions

## v1.0

```

  ✓  🔹 excludeFromFee
    |   Ⓜ onlyOwner
  ✓  🔹 excludeFromMaxTokenPerWallet
    |   Ⓜ onlyOwner
  ✓  🔹 excludeFromReward
    |   Ⓜ onlyOwner
  ✓  🔹 includeInReward
    |   Ⓜ onlyOwner
  ✓  🔹 setSwapTokensAtAmount
    |   Ⓜ onlyOwner
  ✓  🔹 setMarketingWallet
    |   Ⓜ onlyOwner
  ✓  🔹 setSwapAndLiquifyEnabled
    |   Ⓜ onlyOwner
  ✓  🔹 setAutomatedMarketMakerPair
    |   Ⓜ onlyOwner
  ✓  🔹 setLiquidityFee
    |   Ⓜ onlyOwner
  ✓  🔹 setMarketingFee
    |   Ⓜ onlyOwner
  ✓  🔹 setReflectionFee
    |   Ⓜ onlyOwner
  ✓  🔹 setBurnFee
    |   Ⓜ onlyOwner
  ✓  🔹 migrateTokens
    |   Ⓜ onlyOwner
  ✓  🔹 migrateETH
    |   Ⓜ onlyOwner

```

```

  🔹 transfer
  🔹 approve
  🔹 transferFrom
  🔹 increaseAllowance
  🔹 decreaseAllowance

```

```

  ✓  🔹 renounceOwnership
    |   Ⓜ onlyOwner
  ✓  🔹 transferOwnership
    |   Ⓜ onlyOwner

```

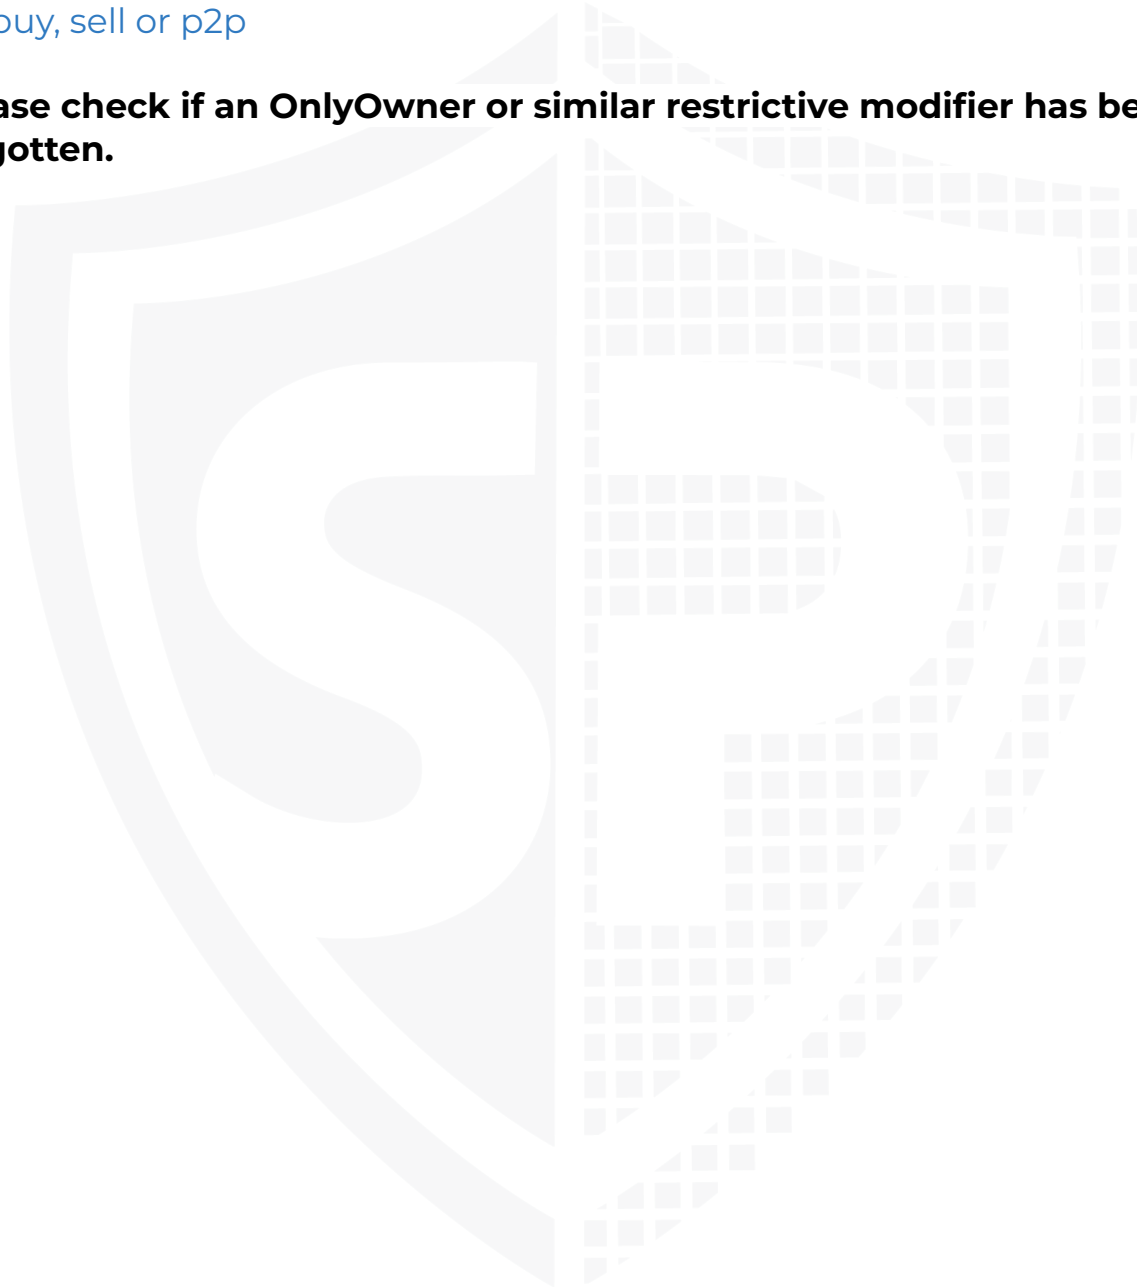

## Comments

- Deployer can set following state variables without any limitations
  - swapTokensAtAmount
- Deployer can enable/disable following state variables
  - \_isExcludedFromFee
  - \_isExcludedFromMaxTokenPerWallet
  - \_isExcludedFromReward
  - \_excluded
  - swapAndLiquifyEnabled
  - \_automatedMarketMakerPairs

- Deployer can set following addresses
  - marketingWallet
- Existing Modifiers
  - onlyOwner
- Reflection, liquidity, marketing and burnfee can be only 25% max for buy, sell or p2p

**Please check if an OnlyOwner or similar restrictive modifier has been forgotten.**

# Source Units in Scope

## v1.0

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/Context.sol	1	————	24	24	9	12	1	————
	contracts/IERC20Metadata.sol	————	1	28	17	4	16	9	
	contracts/SafeMath.sol	1	————	227	215	69	131	10	
	contracts/Ownable.sol	1	————	83	83	31	41	24	————
	contracts/ERC20.sol	1	————	383	359	113	208	83	
	contracts/IERC20.sol	————	1	82	38	16	58	13	
	contracts/ClownWorld.sol	1	2	616	607	484	9	429	
	<b>Totals</b>	<b>5</b>	<b>4</b>	<b>1443</b>	<b>1343</b>	<b>726</b>	<b>475</b>	<b>569</b>	

## Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalised lines of the source unit (e.g. normalises functions spanning multiple lines)
nSLOC	normalised source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

# Audit Results

## Critical issues

**No critical issues**

## High issues

**No high issues**

## Medium issues

**No medium issues**

## Low issues

Issue	File	Type	Line	Description
#1	Main	Missing Zero Address Validation (missing-zero-check)	126-145	Check that the address is not zero
#2	Main	Local variables shadowing	82	Rename the local variables that shadow another component
#3	Main	Missing Events Arithmetic	126-145	Emit an event for critical parameter changes
#4	Main	Owner can drain liquidity	590, 610	The liquidity will be added to the contract balance and because the owner is able to withdraw contract's balance, it is also possible to withdraw liquidity after it is added to the contract's balance.

## Informational issues

Issue	File	Type	Line	Description
#1	Main	State variables that could be declared constant (constable-states)	62, 63, 69	Add the `constant` attributes to state variables that never change

#2	Main	Unused return values	583	Ensure that all the return values of the function calls are used and handle both success and failure cases if needed by the business logic
#3	Main	NatSpec documentation missing	-	If you started to comment your code, also comment all other functions, variables etc.

## Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/latest/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

### 22. March 2023:

- Liquidity will be added to the contract address and the owner is able to take out the balance of the contract with the “migrateETH” function
- There is still an owner (Owner still has not renounced ownership)
- Owner can deploy a new version of the contract which can change any limit and give owner new privileges
- Read whole report and modifiers section for more information

## SWC Attacks

ID	Title	Relationships	Status
<a href="#">SW C-1 36</a>	Unencrypted Private Data On-Chain	<a href="#">CWE-767: Access to Critical Private Variable via Public Method</a>	PASSED
