Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Uniswap, Uniswap, PancakeSwap etc’...)

SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

Description

Binance Ape Station (BAPES) is a deflationary utility token, governed by simple yet powerful BNB smart contracts that give power back to the holders.

Fees are generated from each BAPES trade or transfer. Part of these fees are burned and the rest is pooled into the Propulsor.

Every 12 hours, the Propulsor starts up then propels randomly a BAPES holder into space.

This lucky apestronaut receives all of the fees that was pooled during the previous period!

Project Engagement

During the 25th of April 2022, **Binance Ape Station Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

 - Commit: b11d79d4035aa7b75169359a3761340a603ed8f7

Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
Critical	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
High	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
Medium	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
Low	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
Informational	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:
 - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
 - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
 - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
 - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
 - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

Dependency / Import Path	Count
@openzeppelin/contracts/access/AccessControl.sol	1
@openzeppelin/contracts/token/ERC20/IERC20.sol	2
@openzeppelin/contracts/utils/Address.sol	1
@openzeppelin/contracts/utils/Context.sol	1
@openzeppelin/contracts/utils/math/SafeMath.sol	2

Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.

v1.0

File Name	SHA-1 Hash
contracts/BinanceApeStationToken.sol	46e2d4e5cd9bf949461b6c693b47495d169e592f
contracts/IPinkAntiBot.sol	6361673b07d5e9596276639e64cc0333f56e2ebd
contracts/IBinanceApePropulsor.sol	abcaceed43706a79d73cbf461c44da779e39bc1b
contracts/BinanceApePropulsor.sol	093b17c9bddc35c8de596edec73ca83448fcc767

Version	Contracts	Libraries	Interfaces	Abstract
1.0	2	0	2	0

Exposed Functions

This section lists functions that are explicitly declared public or payable. Please note that getter methods for public stateVars are not included.

Version	Public	Payable
1.0	41	0

Version	External	Internal	Private	Pure	View
1.0	12	32	1	1	17

State Variables

Version	Total	Public
1.0	25	2

Capabilities

Version	Solidity Versions observed	Experimental Features	Can Receive Funds	Uses Assembly	Has Destroyable Contracts
1.0	0.8.3				

Version	Transfers ETH	Low-Level Calls	DelegateCall	Uses Hash Functions	EC Recover	New/Create/Create2
1.0	yes			yes		

Inheritance Graph

v1.0

Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Correct implementation of Token standard
2. Deployer cannot mint any new tokens
3. Deployer cannot burn or lock user funds
4. Deployer cannot pause the contract
5. Overall checkup (Smart Contract Security)

Correct implementation of Token standard

ERC20				
Function	Description	Exist	Tested	Verified
TotalSupply	Provides information about the total token supply	✓	✓	✓
BalanceOf	Provides account balance of the owner's account	✓	✓	✓
Transfer	Executes transfers of a specified number of tokens to a specified address	✓	✓	✓
TransferFrom	Executes transfers of a specified number of tokens from a specified address	✓	✓	✓
Approve	Allow a spender to withdraw a set number of tokens from a specified account	✓	✓	✓
Allowance	Returns a set number of tokens from a spender to the owner	✓	✓	✓

Write functions of contract v1.0

deposit
withdraw
pulse
setBlocksBetweenPropulsion
setMinStakingToBePropelled
pause
unpause

setPinkAntiBotActivated
setStakingContract
setFeesActivated
setBurnPaused
setExcludedFeesAddr
transfer
approve
transferFrom
increaseAllowance
decreaseAllowance
burn
burnFrom

Deployer cannot mint any new tokens

Name	Exist	Tested	Status
Deployer cannot mint	—	—	—
Max / Total Supply	200000000		

Deployer cannot burn or lock user funds

Name	Exist	Tested	Status
Deployer cannot lock	✓	✓	✗
Deployer cannot burn	✓	✓	✓

Comments:

v1.0

- It is possible, that onPreTransferCheck can lock user funds in L146-L148
 - Please do your own research here
- Tokens will be burned while tx but owner cannot burn tokens for other addresses
- Anybody can burn tokens with burn function
- Owner can lock
 - withdraw
 - deposit

Deployer cannot pause the contract

Name	Exist	Tested	Status
Deployer cannot pause	✓	✓	✗

Comments:

v1.0

- onlyAdmin can pause in BinanceApePropulsor

Overall checkup (Smart Contract Security)

Tested	Verified
✓	✓

Legend

Attribute	Symbol
Verified / Checked	✓
Partly Verified	🚩
Unverified / Not checked	✗
Not available	—

Modifiers and public functions

v1.0

- ✓  **deposit**
 - |  notPaused
- ✓  **withdraw**
 - |  notPaused
- ✓  **pulse**
- ✓  **setBlocksBetweenPropulsion**
 - |  onlyAdmin
- ✓  **setMinStakingToBePropelled**
 - |  onlyAdmin
- ✓  **pause**
 - |  onlyAdmin
- ✓  **unpause**
 - |  onlyAdmin

- ✓  **setPinkAntiBotActivated**
 - |  onlyOwner
- ✓  **setStakingContract**
 - |  onlyOwner
- ✓  **setFeesActivated**
 - |  onlyOwner
- ✓  **setBurnPaused**
 - |  onlyOwner
- ✓  **setExcludedFeesAddr**
 - |  onlyOwner
- ✓  **transfer**
- ✓  **approve**
- ✓  **transferFrom**
- ✓  **increaseAllowance**
- ✓  **decreaseAllowance**
- ✓  **burn**
- ✓  **burnFrom**

Comments

- Deployer can set following state variables without any limitations
 - `_minStakingToBePropelled`
 - `_blocksBetweenPropulsion`
- Deployer can enable/disable following state variables
 - `_pinkAntiBotActivated`
 - `_feesActivated`
 - `_burnPaused`
 - Works only if `feesActivated` is true
 - `_excludedFeesAddress`
 - `isPaused`
- Deployer can set following addresses
 - `_stakingContract`
- We recommend to use a external library to generate random numbers
 - VRF
- Exclude 0 amount in deposit
- `staker.addr` will never be address zero, because it will set to the `msg.sender` while depositing (See comparison in L122, `address(0)`)
- Only Binance Ape Station token can call pulse function

Please check if an `OnlyOwner` or similar restrictive modifier has been forgotten.

Source Units in Scope

v1.0

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/BinanceApeStationToken.sol	1	—	231	228	163	10	133	—
	contracts/IPinkAntiBot.sol	—	1	12	5	3	1	5	—
	contracts/IBinanceApePropulsor.sol	—	1	8	5	3	1	7	—
	contracts/BinanceApePropulsor.sol	1	—	220	220	159	1	103	
	Totals	2	2	471	458	328	13	248	

Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalized lines of the source unit (e.g. normalizes functions spanning multiple lines)
nSLOC	normalized source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

Audit Results

AUDIT PASSED

Critical issues

No critical issues

High issues

No high issues

Medium issues

No medium issues

Low issues

Issue	File	Type	Line	Description
#1	Binance ApePro pulsor	Missing Zero Address Validation (missing- zero-check)	38	Check that the address is not zero
#2	Binance ApeStat ionToke n	Missing Zero Address Validation (missing- zero-check)	59	Check that the address is not zero
#3	Binance ApePro pulsor	Missing Events Arithmetic	196, 200	Emit an event for critical parameter changes

#4	Binance ApePro pulsor	Tautology or contradiction	96	<p>Fix the incorrect comparison by changing the value type or the comparison.</p> <p>Balance of stake is an uint256 type so it cannot be lower than 0.</p> <p>We recommend you to replace the comparison ">=" with ">" only to exclude zero balances.</p>
----	-----------------------------	-------------------------------	----	---

Informational issues

No informational issues

Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/v0.5.10/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

SW C-1 05	Unprotected Ether Withdrawal	CWE-284: Improper Access Control	PASSED
SW C-1 04	Unchecked Call Return Value	CWE-252: Unchecked Return Value	PASSED
SW C-1 03	Floating Pragma	CWE-664: Improper Control of a Resource Through its Lifetime	PASSED
SW C-1 02	Outdated Compiler Version	CWE-937: Using Components with Known Vulnerabilities	PASSED
SW C-1 01	Integer Overflow and Underflow	CWE-682: Incorrect Calculation	PASSED
SW C-1 00	Function Default Visibility	CWE-710: Improper Adherence to Coding Standards	PASSED

The logo features the word "SolidProof" in a white, elegant script font. The "P" is particularly large and stylized, with a long horizontal stroke that extends to the left. The background is a solid blue color with a faint, large shield emblem. The shield has a grid-like pattern on its right side and a solid blue area on its left side.
