Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc’...)

SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

Project Engagement

During the 5th of October 2022, **Clupos Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

Contract Link v1.0

- <https://bscscan.com/address/0xe7994b54bb5f3fc185566fcc1386be5fae3294db#code>

Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
Critical	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
High	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
Medium	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
Low	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
Informational	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:
 - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
 - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
 - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
 - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
 - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

```
IUniswapV2Factory  
IUniswapV2Pair  
IUniswapV2Router01  
IUniswapV2Router02  
IERC20  
IERC20Metadata  
📁 Address  
Context  
Ownable  
ERC20
```

Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.

v1.0

File Name	SHA-1 Hash
contracts/clupos.sol	1cd949b9a3f5b03d8165ccfb453e6b0d4e28dae9

Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Is contract an upgradeable
2. Correct implementation of Token standard
3. Deployer cannot mint any new tokens
4. Deployer cannot burn or lock user funds
5. Deployer cannot pause the contract
6. Deployer cannot set fees
7. Deployer cannot blacklist/antisnipe addresses
8. Overall checkup (Smart Contract Security)

Is contract an upgradeable

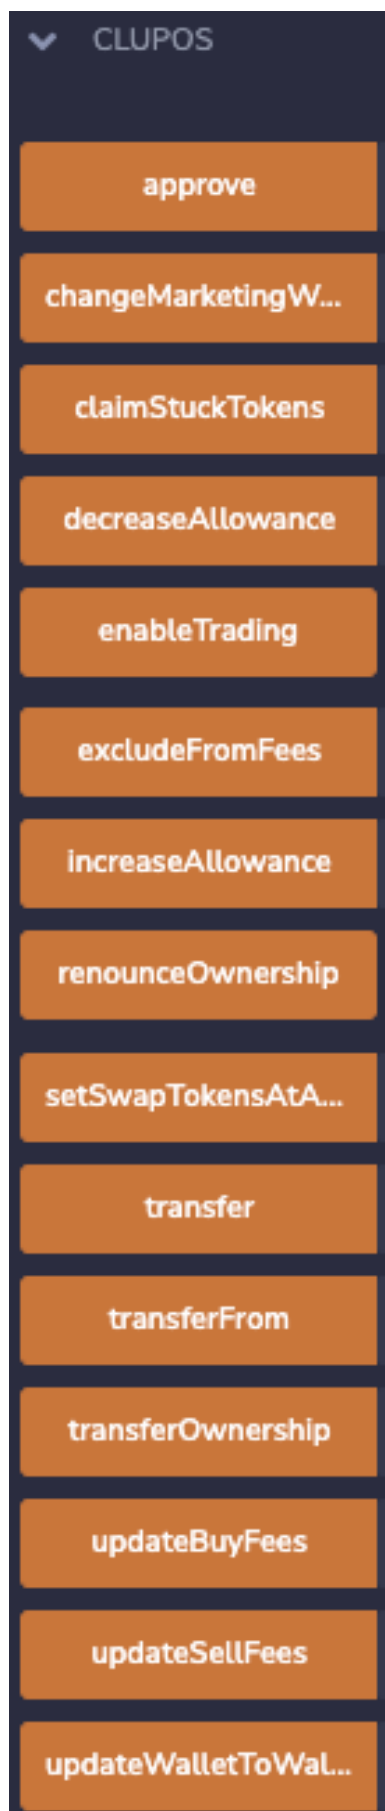

Name	
Is contract an upgradeable?	No

Correct implementation of Token standard

ERC20				
Function	Description	Exist	Tested	Verified
TotalSupply	Provides information about the total token supply	✓	✓	✓
BalanceOf	Provides account balance of the owner's account	✓	✓	✓
Transfer	Executes transfers of a specified number of tokens to a specified address	✓	✓	✓
TransferFrom	Executes transfers of a specified number of tokens from a specified address	✓	✓	✓
Approve	Allow a spender to withdraw a set number of tokens from a specified account	✓	✓	✓
Allowance	Returns a set number of tokens from a spender to the owner	✓	✓	✓

Write functions of contract v1.0

Deployer cannot mint any new tokens

Name	Exist	Tested	Status
Deployer cannot mint	✓	✓	✓
Max / Total Supply	100000000000		

Deployer cannot burn or lock user funds

Name	Exist	Tested	Status
Deployer cannot lock	✓	✓	✓
Deployer cannot burn	✓	✓	✓

Comments:

v1.0

- Tokens can be burned by sending tokens to the “DEAD” address

```
794     function _transfer(address from, address to, uint256 amount) internal override {
795         require(from != address(0), "ERC20: transfer from the zero address");
796         require(to != address(0), "ERC20: transfer to the zero address");
797         require(tradingOpen || _isExcludedFromFees[from] || _isExcludedFromFees[to], "Trading is not open yet");
798
799         if (amount == 0) {
800             super._transfer(from, to, 0);
801             return;
802         }
803     }
```

Deployer cannot pause the contract

Name	Exist	Tested	Status
Deployer cannot pause	—	—	—

Deployer cannot set fees

Name	Exist	Tested	Status
Deployer cannot set fees over 25%	✓	✓	✓
Deployer cannot set fees to nearly 100% or to 100%	✓	✓	✓

```
function updateBuyFees(uint256 _marketingFeeOnBuy↑) external onlyOwner {  
    require(_marketingFeeOnBuy↑ <= 10, "MarketingFeeOnBuy should be less than or equal to 10");  
    marketingFeeOnBuy = _marketingFeeOnBuy↑;  
    emit UpdateBuyFees(marketingFeeOnBuy);  
}
```

```
function updateSellFees(uint256 _marketingFeeOnSell↑) external onlyOwner {  
    require(_marketingFeeOnSell↑ <= 10, "MarketingFeeOnSell should be less than or equal to 10");  
    marketingFeeOnSell = _marketingFeeOnSell↑;  
    emit UpdateSellFees(marketingFeeOnSell);  
}
```

```
function updateWalletToWalletTransferFee(uint256 _walletToWalletTransferFee↑) external onlyOwner{  
    require(_walletToWalletTransferFee↑ <= 10, "Wallet to Wallet Transfer Fee cannot be more than 10%");  
    walletToWalletTransferFee = _walletToWalletTransferFee↑;  
    emit UpdateWalletToWalletTransferFee(walletToWalletTransferFee);  
}
```

Deployer can blacklist/antisnipe addresses

Name	Exist	Tested	Status
Deployer cannot blacklist/antisnipe addresses	—	—	—

Comments:

v1.0

- There is a botFee of 42% in the transfer function that will be send to the contract address

```
804     if (tradingOpen && launchBlock + 1 >= block.number) {  
805         uint256 botFee = (amount↑ * 42) / 100;  
806         super._transfer(from↑, address(this), botFee);  
807         amount↑ -= botFee;  
808         super._transfer(from↑, to↑, amount↑);  
809         return;  
810     }
```

Overall checkup (Smart Contract Security)

Modifiers and public functions

v1.0

```

  ✓ 🔹 claimStuckTokens
    🔹 onlyOwner
  ✓ 🔹 excludeFromFees
    🔹 onlyOwner
  ✓ 🔹 updateBuyFees
    🔹 onlyOwner
  ✓ 🔹 updateSellFees
    🔹 onlyOwner
  ✓ 🔹 updateWalletToWalletTransferFee
    🔹 onlyOwner
  ✓ 🔹 changeMarketingWallet
    🔹 onlyOwner
  ✓ 🔹 enableTrading
    🔹 onlyOwner
  ✓ 🔹 setSwapTokensAtAmount
    🔹 onlyOwner

```

```

  ✓ 🔹 renounceOwnership
    🔹 onlyOwner
  ✓ 🔹 transferOwnership
    🔹 onlyOwner

```

```

  🔹 transfer
  🔹 approve
  🔹 transferFrom
  🔹 increaseAllowance
  🔹 decreaseAllowance

```

Comments

- Deployer can enable/disable following state variables
 - `_isExcludedFromFees`
- Deployer can set following addresses
 - `_owner`
 - `marketingWallet`
- Existing Modifiers
 - `onlyOwner`
- Owner is able to take contract balance
-

```
740 function claimStuckTokens(address token↑) external onlyOwner {  
741     require(token↑ != address(this), "Owner cannot claim contract's balance of its own tokens");  
742     if (token↑ == address(0x0)) {  
743         payable(msg.sender).sendValue(address(this).balance);  
744         return;  
745     }  
746     IERC20 ERC20token = IERC20(token↑);  
747     uint256 balance = ERC20token.balanceOf(address(this));  
748     ERC20token.transfer(msg.sender, balance);  
749 }
```

Please check if an OnlyOwner or similar restrictive modifier has been forgotten.

Source Units in Scope

v1.0

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/clupos.sol	5	6	874	594	391	135	443	
	Totals	5	6	874	594	391	135	443	

Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalised lines of the source unit (e.g. normalises functions spanning multiple lines)
nSLOC	normalised source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/latest/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.
